

PRESS RELEASE WÖHR MULTIPARKER 750 / 760

A pallet-less automatic car parking system - live on the Wöhr booth.
This new technique is ideal for buildings where the static requires concrete slabs. We use them like a high rack storage to park cars directly on them.

The car is driven into the transfer area, turned if required, then it is received by a longitudinal driven transport unit „LAT“ which takes it by means of a shuttle and vertical lift directly to the provided car park place on the concrete slab.

The Multiparker 750 suits for small floor areas and arrangements up to 30 levels above each other.

The Multiparker 760 suits for huge surface areas and arrangements up to 200 cars per parking level. Each parking level has self-driven shuttles and vertical lifts which operate independently.

Both versions suit for condominiums, offices, hotels or public parking.
