

Press Release Wöhr Parklift 421

Make 3 on 1 – the new Wöhr Parklift 421 offers 200 % more parking space on the surface of only one parking place. This means, dependent parking spaces on 3 levels without pit.

A compact solution where ever for retrofit additional car parking places are required and the parked cars can be manoeuvred: For hotels, offices and for any commercial use such as car dealers and service centers, car rentals, car-sharing or for valet parking – in high halls or outside.

And how does the system work? Quite simple!

Each level is filled up one after the other in lowered position and emptied the same way. The parking system has 2 platforms. First the upper one is used, then the lower one and then, once both platforms have been lifted, the cars are parked on the floor surface.

The lifting and lowering is provided hydraulically by means of a key at the operating device. Multiple Parklift 421 systems can be arranged next or behind each other. Platform widths up to 2,7 m, parking heights up to 1,8 m and platform weights up to 2,6 t are available, sufficient for SUVs and bigger sedan cars.
